

**PANTHER innovation**  
**Is your REWARD:**

We listened, we engineered, and we delivered. The patented design of **PANTHER PROTECT MKIII** has achieved exceptional strength that now offers a more affordable and attractive security solution. A superior product, without the high price tag or the unnecessary obstructed view from bars or grills.

## SECURITY DOORS & WINDOWS

**Why choose PANTHER PROTECT ?** Whilst there are many other brands and choices available, none have the unique features that make the Panther **MKIII** range one of the strongest products on the domestic market. The simplicity in the mechanics of how the mesh is held in place is the secret to making this product so strong and so successful.

The ingenious "load locking leg" ensures the entire perimeter of the mesh is held tight. There is no need for unsightly screws, rivets, clamping or mechanical fixing – Unlike other systems that start to weaken from the first impact, the "load locking leg" provides optimum strength and gets stronger the more impacts it receives.

With **PANTHER PROTECT MKIII** doors and windows, the more forces that are applied, the more secure the mesh becomes inside the frame where the impact is occurring.

**Superior Strength without the price tag!**  
**PANTHER PROTECT** proves it can be done.

The more force applied, the more secure the mesh becomes, causing a jamming effect

## Safety Screening System

The **BEST VALUE FOR MONEY** is the  
**PANTHER PROTECT** goal.

We recognised the frustration for home owners who want an affordable quality alternative for their home security. Unfortunately most of the choices available were cost prohibitive.

By using clever design and the latest innovation, **PANTHER PROTECT MKIII** can now offer a range of top quality doors and windows that exceed in strength and aesthetic appeal compared to other high end stainless security systems at a much more affordable price.

**“Dont overpay for outdated and redundant engineering –  
Invest in PANTHER PROTECT security doors and windows  
for a long lasting investment and peace of mind”**

**EXTENSIVE TESTING – It’ s not what you say, IT’ S WHAT YOU CAN PROVE!**

In an industry that is littered with questionable claims and confusion as to test results, ambiguity of product performance and what all the jargon means, many security door and window businesses promote claims they cannot prove or will not produce evidence to substantiate their claims. **PANTHER PROTECT** values the information we give to our customers and offer complete transparency on our test results and performance information.

All **PANTHER PROTECT** product testing has been carried out by an independent NATA accredited laboratory. After extensive testing for Dynamic Impact (AS5039), Salt Spray / Corrosion (AS2331.3.1) and Knife Shear (AS5041) our products exceeded all relevant Australian Standards.

**THE BENEFITS THAT ARE DERIVED FROM THIS DESIGN:**

- Increased Strength around the entire perimeter of the frame.
- No unsightly fixing methods – No screws, rivets or welding.
- Provides exceptional value for money through cost savings of manufacturing time without compromising on the quality of materials.
- No contact with dissimilar metals – If there is a break in the surface integrity such as a hole drilled through the aluminium frame to allow for fixing the mesh using screws or rivets, this can make the exposed areas susceptible to accelerated corrosion. Panther Protect needs no mechanised method to secure the mesh and has an isolator membrane that prevents any contact of dissimilar metals.
